## INTRODUCTION

**Profile:** The Aboriginal Population Profile outlines the age structure of the non-Aboriginal and Aboriginal populations that resided in Alberta's cities and census divisions in 1996

**Data Source:** The Aboriginal population data was derived from the ethnic origin question used in the 1996 census of Canada. A copy of the question is listed in Appendix A.

**Report:** Section I (pps. 1-17) pertains to those individuals identifying themselves as Aboriginal, that is, North American Indian, Metis or Inuit.

Section II (pps. 18-34) pertains to the total of the single and multiple origins of persons identifying themselves as North American Indian, Metis and Inuit.

**Points to Note:**

- (a) Percentages may not add to 100 due to rounding.
- (b) Aggregate totals are different from overall totals. Statistics Canada uses the procedures of random rounding and area suppression to prevent the possibility of associating statistical data with an identifiable individual.
- (c) North American Indian is abbreviated to N.A. Indian
